Jernigan - Sprint 1 Results

Vision Statement

Jernigan: A Link to the Past is a future Android app that will show users unique timelines of the places around them. This app is for anyone interested in learning about the history hidden in places they visit - you can think of it as your own personal tour guide. Using the phone's GPS, it will create a timeline of the site's history and teach the user things they'd never think to look up themselves. Unlike other location-based apps on the Google Play store, Jernigan will teach you about places that you've walked by a thousand times and never given a second thought.

General Definitions

User account - Username & Password combination

Username - Alphanumeric string

Password - Alphanumeric string

Timeline - Object containing summarization of text about a particular location
