Jernigan: A Link to the Past - User Stories

As a user, I want my own user account, so my friends can keep up with where I've been.

As a user, I want to save basic information about myself, so my online interactions can be more meaningful.

As a user, I want to comment on a location I visit so my friends can see what I think about it.

As a user, I want share pictures of a location, so my friends can see what the place is like.

As a user, I want to give a location a rating, so that others can plan their trips better.

As a database administrator, I want to save each timeline that has been created, to reduce wait times due to repeated timeline creation.

As a database administrator, I want to the users to have passwords, so that the database will be more secure.

As a database administrator, I want to create an intuitive database structure, so that users and future administrators may maintain it easily.

As an artificial intelligence developer, I want to utilize clever algorithms to create timelines, so that the user can learn more about a location's history.

As an artificial intelligence developer, I want to sort out the useful data from the useless data, so that the user will save time by learning only useful information.

As a GUI developer, I want to utilize the most attractive fonts and graphics, so that the user experience will be better.

As a GUI developer, I want to achieve quick UI response times, so that the user will stay interested.
